WEATHER OF CONCERN

Weather of Concern

- A Flash Flood Watch has been issued for the North Bay Interior Valleys and North Bay Mountains from 1600 hours Wednesday through 0300 hours Thursday. Impacted areas will include the recent Atlas, Tubbs, Nuns, and Pocket burn scars, as well as the Fountaingrove neighborhood in northeast Santa Rosa.
- Heavy rainfall is expected with amounts ranging from 1-2 inches for the North Bay Valleys and 2-3 inches for the North Bay Mountains with locally higher amounts possible, particularly for southwest-facing slopes. Rainfall rates are expected to exceed 0.5 inch per hour. Impacts will include debris flows, mudslides, and flash flooding in and around recent burn scars.

WEATHER SYNOPSIS BY REGION

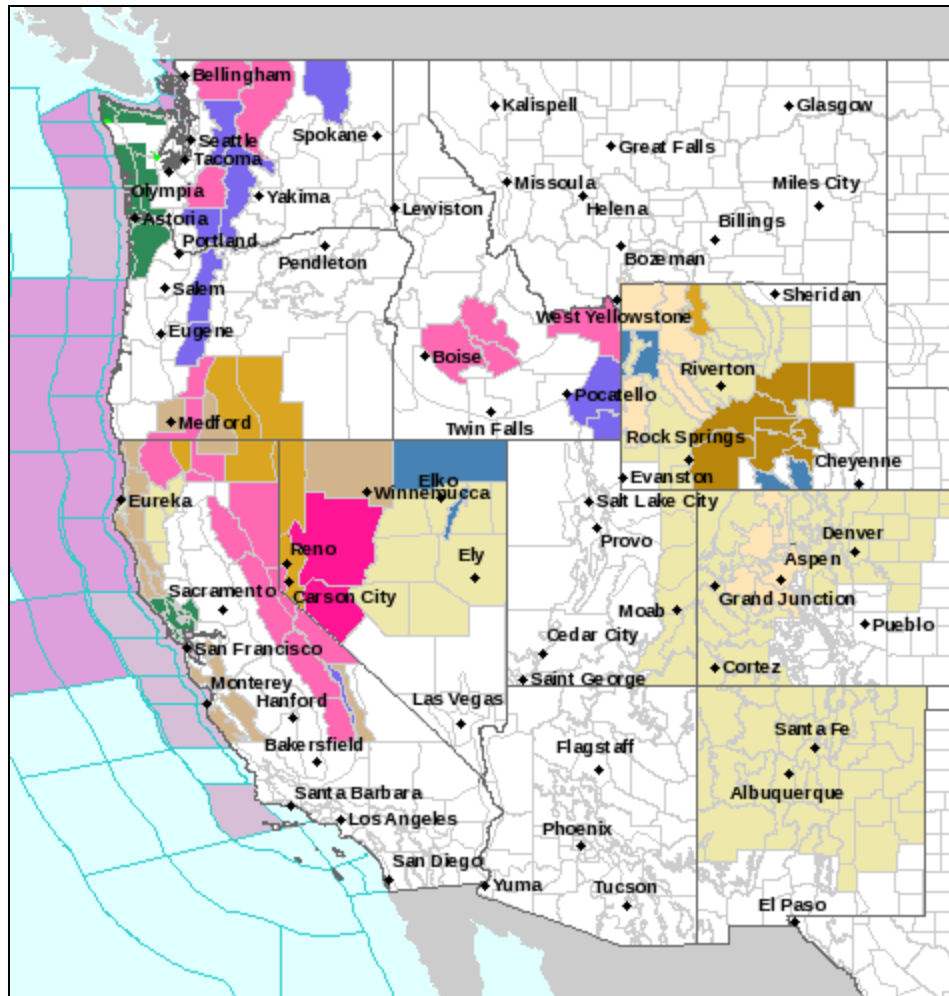

NORTHERN CALIFORNIA

An unsettled weather pattern will continue over the region into next week as a series of weather systems moves through the region. Many days through the middle of next week will have precipitation, but Friday into late Saturday will be dry. Snow levels will vary quite a bit, not only by location, but with each weather system. It appears that the lowest snow levels will be around 3500-4500 ft in the north and 6000-7000 ft in the south. Thursday is most likely to have the lowest snow levels this week at the lower end of those ranges. There will generally be relatively light amounts of snow accumulation over the mountain roadway passes. Periods of gusty southerly winds will also continue as each storm system moves through the region, but the strongest winds will remain in the high country where gusts during the periods of stronger winds will generally be 30-40 mph while most lower elevation areas will see gusts up to around 25-30 mph then.

SOUTHERN CALIFORNIA

Zonal flow between low pressure over the Pacific Northwest and high pressure over Mexico will maintain near normal temperatures today, with mid 50s to mid 60s across the mountains and upper 60s and 70s in the valleys. Westerly winds of 20 to 30 mph with gusts to 50 mph will surface over the Tehachapi Mountains and eastward across the Central Mojave. A Pacific trough will bring a cooling trend Thursday and Friday. This trough will also bring showers to Central California tonight through Friday afternoon, with most locations expected to receive between a quarter inch and a half inch of rainfall. However, the Central Sierra and the Big Sur Coast will receive between 1 and 3 inches of rainfall. Possible showers will occur across Southern California Thursday night through Friday afternoon, with little or no rainfall accumulation expected. Westerly winds will become more widespread over the mountains and deserts Thursday and Friday. A weak ridge of high pressure will bring warmer and drier conditions to the area Saturday. Another Pacific trough will move into the West Coast Sunday and Monday spreading showers from north to south and causing temperatures to become below normal.
